Colorado MicroDisplay Personal Headset System

Scotts Valley, CA (August 8, 2000) --- Audio headsets have been on the market since the first pair of earphones you had as a teenager. Their styles have ranged from large to small and from comfortable to awkward. A recent development from Colorado Microdisplay is a video headset, the CMDPHS (Personal Headset System). The PHS incorporates a 9 by 12-mm, SVGA microdisplay that when placed in front of the eye produces a clear color image approximately the size of a 15-inch PC monitor. CMD chartered IDE to design and develop a rugged and secure video headset utilizing CMD's latest, state of the art, 800 x 600 optics engine. IDE's design facilitates the PHS's functionality by providing excellent fit and comfort for a wide range of users in the industrial applications sector- it remains stable even with quick, dynamic head movements. For a jet engine mechanic who uses the headset to read intricate wiring schematics, a steadfast, vibration free image is extremely critical.
